

Redox Reaction of Carbon Nanotubes in a Biological
Matrix

Wei Zhao* and Azhar Kamel

Department of Chemistry, University of Arkansas at Little
Rock, Little Rock, Arkansas 72204

The redox reaction of single-walled carbon nanotubes (SWNTs) with hydrogen peroxide in a blood model matrix (BMM) has been studied. The matrix contains bovine serum albumin (BSA), triacetin, and glucose. The effects of each BMM component on the reaction will be discussed.
